

Amendments to the Specification

Please amend the paragraph beginning on line 18, page 1 as follows:

An internal circuit of an Large Scale Integration (LSI) ~~LSI~~ can be damaged by electrostatic discharge (ESD) that is generated by contact with a human being, the friction against a housing, or the like. In order to protect the internal circuit against the ESD, the LSI comprises an ESD protection circuit connected to power source terminals and an input/output terminal.
